UAP | POZNAŃ

The design of a modular seat system design for public buildings. The furniture has tree adjustable levels, which enables sitting in various position, making it possible for the users to perch themselves for a while or to lean to the armrest.

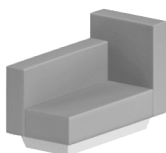

One module is provided for four persons. The hidden plinth gives the furniture is hovering in the air. The variety of the module colors and forms adds some liveliness to the interior while the possibility to combine the modules in several practical arrangements gives you considerable freedom in shaping the public space.
